

Carbon Monoxide Monitor and Alarm

Honeywell

According to the U.S. Consumer Products Safety Commission, two hundred people die and thousands more are sickened each year by carbon monoxide (CO) poisoning. Now, from a trusted name in home comfort and monitoring solutions comes high-technology prevention — the Carbon Monoxide Monitor and Alarm from Honeywell.

Carbon Monoxide Monitor and Alarm

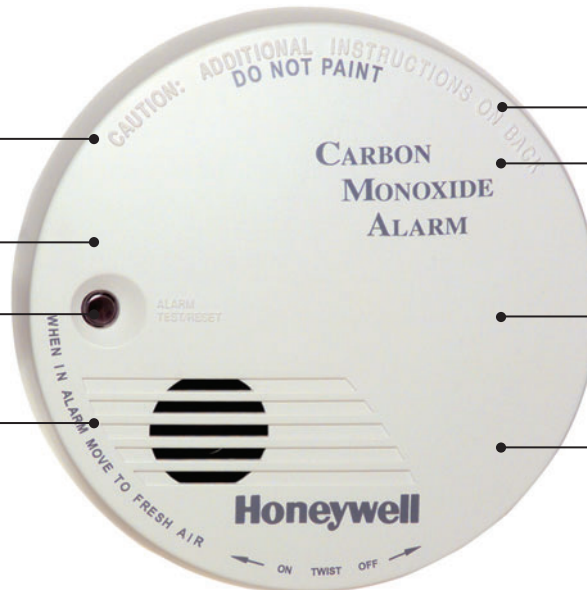

RELIABLE DETECTION TECHNOLOGY AGAINST A SILENT KILLER

Meets Underwriter's Laboratories'—
(UL) 2034 Standard, C-UL (Canada)
and CE (Europe)

Loud 85-decibel horn —
Pulsating LED warn of presence
of carbon monoxide

Low-battery warning —
"Chirps" and LED double
flashes*

Energy-saving design —
Extends battery life to more
than one year under normal use

Warning "beeps" —
Notify you of mechanical failure

Test/Reset button —
In the *Test* mode, pressing the button
makes the unit test all alarm functions.
During an alarm, pressing the button
temporarily quiets the alarm

Installs quickly on wall or ceiling —
Mount bracket, screws and 9-volt alkaline
battery included. No wiring or electrical
outlets needed

Provides protection —
Even when household electricity fails
(when used as directed) Fewest false
alarms Carbon monoxide (CO) facts

Technology that delivers reliability

- The only biotechnology-based infrared-gas sensor that mimics the human response to carbon monoxide
- Detects low levels of carbon monoxide (70 parts per million)
- Quick recovery. Rapidly returns to its original state when carbon monoxide is eliminated from the environment
- Every unit is 100% gas-tested to ensure accurate, timely response
- Maintenance-free. Proven circuit design, microprocessor and software. Solid-state infrared sensor uses a reservoir that never needs replacement
- Microprocessor intelligence. Self-tests every 10 minutes. Supervises sensor and alarm circuit status to ensure protection
- One-year warranty and long product life

*If detector is used as directed, properly installed and batteries are changed regularly.

Carbon monoxide (CO) facts

- Odorless, colorless, tasteless, poisonous gas
- Unwanted by-product of the incomplete combustion of fuels, such as gas, oil and wood
- Nearly 5,000 people annually are treated in emergency rooms for carbon monoxide poisoning. Experts suspect many more mistake symptoms of lower-level poisoning with those of the flu and go untreated
- About 200 people die annually from carbon monoxide poisoning associated with home fuel-burning appliances
- Less than a third of U.S. households use carbon monoxide detectors
- More than two dozen U.S. cities require the use of carbon monoxide detectors
- Each home should use at least one carbon monoxide alarm, says the U.S. Consumer Product Safety Commission. Choose an alarm that meets UL Standard 2034
